Skills

Frontend Development

- HTML5, CSS3, JavaScript, TypeScript, and styled-components
- Web development with JavaScript frameworks: React & Vue.js
- Mobile app development with React Native & Flutter, and experience with build/deploy tools such as Android Studio, XCode, Fastlane, and Gradle

Backend Development

- Web API's using Node.js with GraphQL & REST interfaces
- Relational databases (PostgreSQL, MySQL, Microsoft SQL Server), non-relational databases (NoSQL), and document databases (MongoDB)

General

- Experienced with working techniques like Agile and Scrum
- Knowledge of Git and the Git flow workflow
- Practical experience with Docker

Experience

ERP & Mobile App Developer - [Team Solutions](#), Ternat

01/2023 - present

Development of ERP software with FileMaker and a mobile application with Flutter.

Web & Mobile Developer - [Codify](#), Aalst

10/2021 - 08/2022

Development of websites and mobile applications using React & React Native, Apollo (GraphQL) as state manager, Node.js, and Koa.js. My main tasks at Codify were: developing new features, fixing bugs, and deploying the applications.

Intern Web App Developer - That's Why, Wevelgem

02/2021 - 06/2021

At this internship, my main task was researching Flutter and React Native. As a part of the research, I also did some technical analysis by developing a web shop app in each framework. Besides the research, I also did a code review of the Flutter app of [MyPitch](#).

Education

Professional bachelor Multimedia & Creative Technologies - Howest

09/2018 - 08/2021

Industrial ICT - KA Geraardsbergen

09/2016 - 06/2018

Projects

M&V Sportevents savings cards app

2022

Together with two friends, I built a mobile app that simplifies the process of collecting points for your savings cards and exchanging the points for rewards. My role in this project was mostly developing the frontend. The following technologies were used in the project:

- Frontend: TypeScript, React Native, Apollo client (GraphQL state manager) with REST link, auth with JWT tokens, styled-components, and I published the app to the [Google Play Store](#) and the [Apple App Store](#).
- Backend: TypeScript, REST API, PostgreSQL database, Sequelize (ORM), blob storage for images, and automatic deploys to Azure.

Certificates/courses

[JavaScript Algorithms and Data Structures](#)

2022

[Learning GraphQL](#)

2022

[Learning Webpack 4](#)

2022
